Together with prof. dr. F.K.L. Spijkervet (chair of department of Oral and

Maxillofacial Surgery) and dr. K. Delli, prof. dr. A. Vissink is responsible for the research program of the Department of Oral and Maxillofacial Surgery. The main research goals are:

- Optimization of the diagnostics of head and neck disorders
- Development of methods to detect head and neck disorders in an early stage
- Development of methods to reduce the morbidity of head and neck disorders
- Evaluation of the treatment outcome of various (new) treatment modalities for head and neck disorders

The various projects are related to the research programs of the Faculty of Medicine (Oncology, Guide, TRIGR and Kolff Institute).

Main research topics

Within the whole spectrum of the research of the Department of Oral and Maxillofacial Surgery, the projects in which prof. dr. A. Vissink not only acts as a co-ordinator and advisor, but in which he is involved as an active participant too are mainly related to Oral Medicine, a.o.:

- Research related to the pathogenesis and treatment of auto-immune diseases, in particular Sjögren's syndrome (with a focus on salivary gland tissues and saliva) and bullous diseases of the oral mucosa
- Research related to the mechanism, prevention and treatment of the effects of ionizing irradiation in the head and neck region on normal tissues, in particular salivary glands, oral mucosa and dentition
- Research related to the association between periodontal diseases and general health
- Research related to reconstructive surgery and implant dentistry, in particular clinical aspects
